THE SMART CITIES DIVIDEND Australian cities and their pursuits

WE BUILD SMART CITIES.COM

SUSTAINABLE GALS

SMART CITIES

A smart city is one that uses technology and data to accelerate liveability, workability and sustainability.

DEFINITION A simple idea – *The Smart Cities Readiness Guide, 2013*

The smart city is one that uses tech and data for good.

And there are three parts to that job:

- 1. Collect
- 2. Communicate
- 3. Crunch

THE SHORT HAND

1. Collect: smart devices are used to collect data about the condition of something.

2. Communicate: once the data has been collected, it needs to be communicated across a network to a place where it can be stored.

3. Crunch: you then take that data and crunch (analyse) it for one of three purposes – 1) presenting, 2) perfecting or 3) predicting.

CORE FUNCTION

of the smart city

Micro Mobility

The Crosswalk
